41CL

# REFERENCE

---

# ACKNOWLEDGEMENTS

---

Monte Dalrymple ...

- for having created the 41CL, an HP-41 on steroids
- for having taken leadership of the 41CL update project
- for having accepted to publish his sales statistics
- for continuously pushing the limits
- for his patience, support & friendship

Robert Prosperi ...

- for his help and invaluable inputs in everything I publish
- for his patience, support & friendship

Ángel Martín ...

- for his help and invaluable inputs on the 41CL update project
- for his mind bending modules he is creating, the MCode master of masters
- for his friendship

# NEWS

---

41CL v5 is currently available

Flexible Hardware Module (FHM) design is completed

FHM based Time module is available (41CL mounted only for now)

FHM based X-Memory (x2) has been prototyped

FHM based X-Functions with X-Memory (x2) has been prototyped

FHM based Time module with X-Memory (x2) has been prototyped

FHM based GNSS module has been prototyped

Many more modules using FHM design are currently explored

Monte Dalrymple's 41C Flexible Hardware Module

# PC HOST SOFTWARE

---

# DESCRIPTION

---

The goal of this PC host software is to ...

- ease the process of maintaining your 41CL up-to-date

- transfer ROM image files between your PC and the 41CL

- manage zipped rom files content and file generations

The PC host software has successfully been tested on ...

- macOS v10.13.6 64 bits

- Ubuntu Linux v18.10 64 bits

- Windows v7 Pro 32 & 64 bits

The PC host software support the following board versions ...

- beta & v2 reported as first generation

- v3 & v4 reported as second generation

- v5 reported as third generation

# PREREQUISITE

# DOWNLOAD & INSTALL JAVA

The PC host software is written in Java 8 and is a console program

You need to install a Java 8 Runtime Environment (JRE8) or higher to run the PC host software

[www.oracle.com/technetwork/java/javase/downloads/](http://www.oracle.com/technetwork/java/javase/downloads/)

Press on: JRE DOWNLOAD

Accept Licence Agreement

Select the JRE that fit your operating system environment

Java SE Development Kit 8u191			
You must accept the <a href="#">Oracle Binary Code License Agreement for Java SE</a> to download this software.			
Thank you for accepting the Oracle Binary Code License Agreement for Java SE; you may now download this software.			
Product / File Description	File Size	Download	
Linux ARM 32 Hard Float ABI	72.97 MB	<a href="#">jdk-8u191-linux-arm32-vfp-hflt.tar.gz</a>	
Linux ARM 64 Hard Float ABI	69.92 MB	<a href="#">jdk-8u191-linux-arm64-vfp-hflt.tar.gz</a>	
Linux x86	170.89 MB	<a href="#">jdk-8u191-linux-i586.rpm</a>	
Linux x86	185.69 MB	<a href="#">jdk-8u191-linux-i586.tar.gz</a>	Ubuntu Linux 32 bits
Linux x64	167.99 MB	<a href="#">jdk-8u191-linux-x64.rpm</a>	
Linux x64	182.87 MB	<a href="#">jdk-8u191-linux-x64.tar.gz</a>	Ubuntu Linux 64 bits
Mac OS X x64	245.92 MB	<a href="#">jdk-8u191-macosx-x64.dmg</a>	macOS 64 bits
Solaris SPARC 64-bit (SVR4 package)	133.04 MB	<a href="#">jdk-8u191-solaris-sparcv9.tar.Z</a>	
Solaris SPARC 64-bit	94.28 MB	<a href="#">jdk-8u191-solaris-sparcv9.tar.gz</a>	
Solaris x64 (SVR4 package)	134.04 MB	<a href="#">jdk-8u191-solaris-x64.tar.Z</a>	
Solaris x64	92.13 MB	<a href="#">jdk-8u191-solaris-x64.tar.gz</a>	
Windows x86	197.34 MB	<a href="#">jdk-8u191-windows-i586.exe</a>	Windows 32 bits
Windows x64	207.22 MB	<a href="#">jdk-8u191-windows-x64.exe</a>	Windows 64 bits

Run the installation program and follow the installation procedure

To activate the new environment variables, some OS will ask you to do a re-login or a reboot.

# PREREQUISITE

# VALIDATE JAVA INSTALLATION

.....

Test the JRE8 installation

Starting the terminal application/window (aka command line)

Windows	press [Windows] + [R] to open "Run" box, type "cmd", click [OK]
Windows 10	press [Windows] + [R] to open "Run" box, type "powershell", click [OK]
macOS	click on "Finder" → "Applications" → "Utilities" → "Terminal"
Ubuntu Linux	open the dash, type "terminal", press [RETURN]

Validate Java version active by default

Type	java -version
Output	Java version "1.8.0_191" Java(TM) SE Runtime Environment (build 1.8.0_191-b12)
Note	Version number should match the JRE8 that you have downloaded and installed.

Closing the terminal application/window

Windows	type "exit", press [RETURN]
macOS	press [command] + [w] (to close the Terminal window) press [command] + [q] (to close the Terminal application)
Ubuntu Linux	press [ctrl] + [d]

# INSTALLATION

---

## CL Update Software Download

Create	the clupdate folder under your home directory
Download	<a href="http://www.systemyde.com/zip/clupdate-1.1.0.zip">www.systemyde.com/zip/clupdate-1.1.0.zip</a>
To	your new clupdate folder
Unzip	clupdate-1.1.0.zip

## CL Update Software Zip File Content

Release Notes	clupdate-1.1.0-release-notes.txt
PC host software	clupdate-1.1.0.jar
Basic Instructions	clupdate-1.1.0-readme.txt

## 41CL ROM Files Package

Download	rom_files_yymmdd.zip
Latest - From	<a href="http://www.systemyde.com/hp41/files.html">www.systemyde.com/hp41/files.html</a>
Archives - From	<a href="http://www.systemyde.com/hp41/archive.html">www.systemyde.com/hp41/archive.html</a>
To	PC host software folder

# HELP DISPLAY

.....

```
java -jar clupdate-1.1.0.jar
or
java -jar clupdate-1.1.0.jar --help
```

command	parameter(s)	description
-----	-----	+ -----
--help		list available commands
--manual		show user's manual
--list	file-or-dir-name	list rom_files content
--validate	file-or-dir-name	validate rom_files content
--diff	file-or-dir-name file-or-dir-name	show diff between two rom_files
--update	file-or-dir-name serial-port baud-rate	update to rom_files content
--upload	filename serial-port baud-rate	upload a ROM image to a 41CL
--download	filename serial-port baud-rate	download a ROM image from a 41CL

PC Output

# MANUAL DISPLAY

```
java -jar clupdate-1.1.0.jar --manual
```

```
=====
Users' manual
=====
```

```
...
...
...
```

```
-----
Command ...: --validate
```

```
Description: Validate mem_ref*.txt, FLDB*.ROM, all *.ROM files and list inconsistencies.
```

```
.....: For v2 board ...
```

```
.....:     mem_ref_v2.txt is loaded first, then FLDB_V2.ROM is loaded, then if found, all ROMs are loaded.
```

```
.....:     Finally, each ROM YCRC is calculated then an inconsistency report is printed on the console.
```

```
.....: For v3/4 boards ...
```

```
.....:     mem_ref.txt is loaded first, then FLDB.ROM is loaded, then if found, all ROMs are loaded.
```

```
.....:     Finally, each ROM YCRC is calculated then an inconsistency report is printed on the console.
```

```
.....: For v5 board ...
```

```
.....:     mem_ref_v5.txt is loaded first, then FLDB.ROM is loaded, then if found, all ROMs are loaded.
```

```
.....:     Finally, each ROM YCRC is calculated then an inconsistency report is printed on the console.
```

```
Summary ...: --validate file-or-dir-name
```

```
Argument #1: zip filename or folder name (containing: mem_ref_v2.txt, mem_ref.txt, mem_ref_v5.txt and *.ROM files)
```

```
Windows ex.: zip file: java -jar clupdate-1.1.0.jar --validate c:\clupdate\rom_files_YYMMDD.zip
```

```
Linux   ex.:  folder: java -jar clupdate-1.1.0.jar --validate ~/tmp/rom_files_YYMMDD
```

```
macOS   ex.:  zip file: java -jar clupdate-1.1.0.jar --validate rom_files_YYMMDD.zip
-----
```

```

# FLASH UPDATE INTRODUCTION

---

# FLASH FACTS

.....

Flash memory is a type of nonvolatile memory that erases data in units called blocks. A block stored on a flash memory chip must be erased before data can be written, or programmed, to the microchip. Flash memory retains data for an extended period of time whether a flash-equipped device is powered on or off.

There are two types of Flash memory:

NOR : random access, SRAM interface, fast read, perfect for running code

NAND : sequential access, I/O interface, fast erase/write, perfect for data storage

41CL specific:

41CL uses NOR Flash of 2MB (beta/v2), 4MB (v3/v4) and 8MB (v5)

41CL has a typical Flash block size of 64KB

A HP-41C ROM image is 4096 Words of 10 bits (4K10bW) which is translated for the 41CL to 4096 Words of 16 bits (4K16bW) or 8192 Bytes (8KB)

1 x 64KB Flash block contains 8 x 8KB ROM images

Updating 41CL Flash stored ROM image(s) means:

Copy a Flash block to RAM Buffer (a 64KB RAM memory space temporary reserved for this purpose)

Update RAM Buffer page(s) with new ROM image(s)

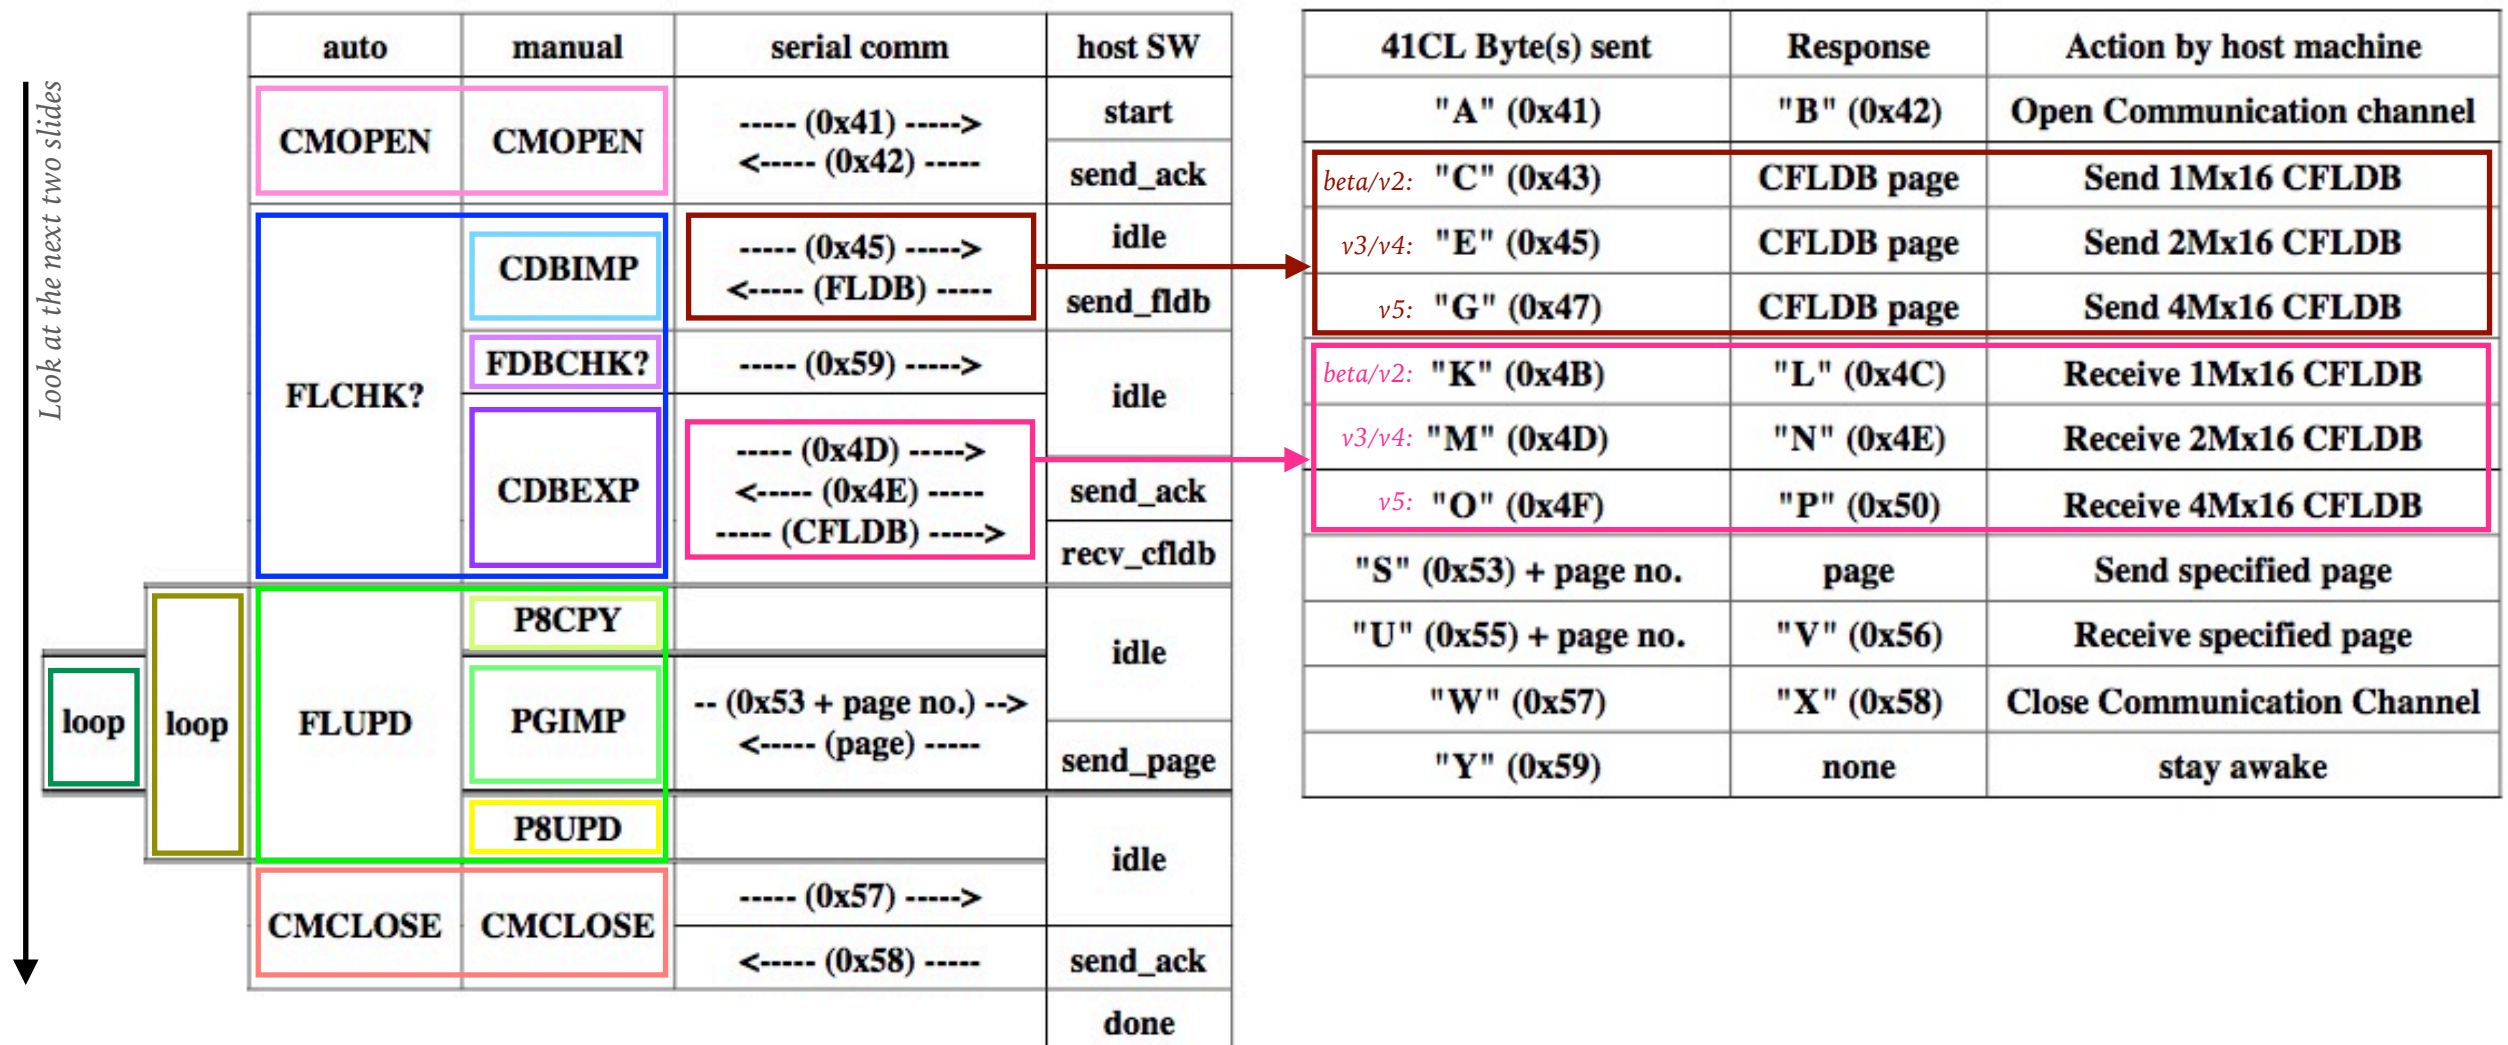

Erase the outdated Flash block

Copy the updated RAM Buffer to the newly erased Flash block

# PROTOCOL OVERVIEW

1 OF 3

Manual: 41CL Update Functions, rev. 2017/11/09, Page 35 & 36

File: [www.systemyde.com/pdf/cl\\_update.pdf](http://www.systemyde.com/pdf/cl_update.pdf)

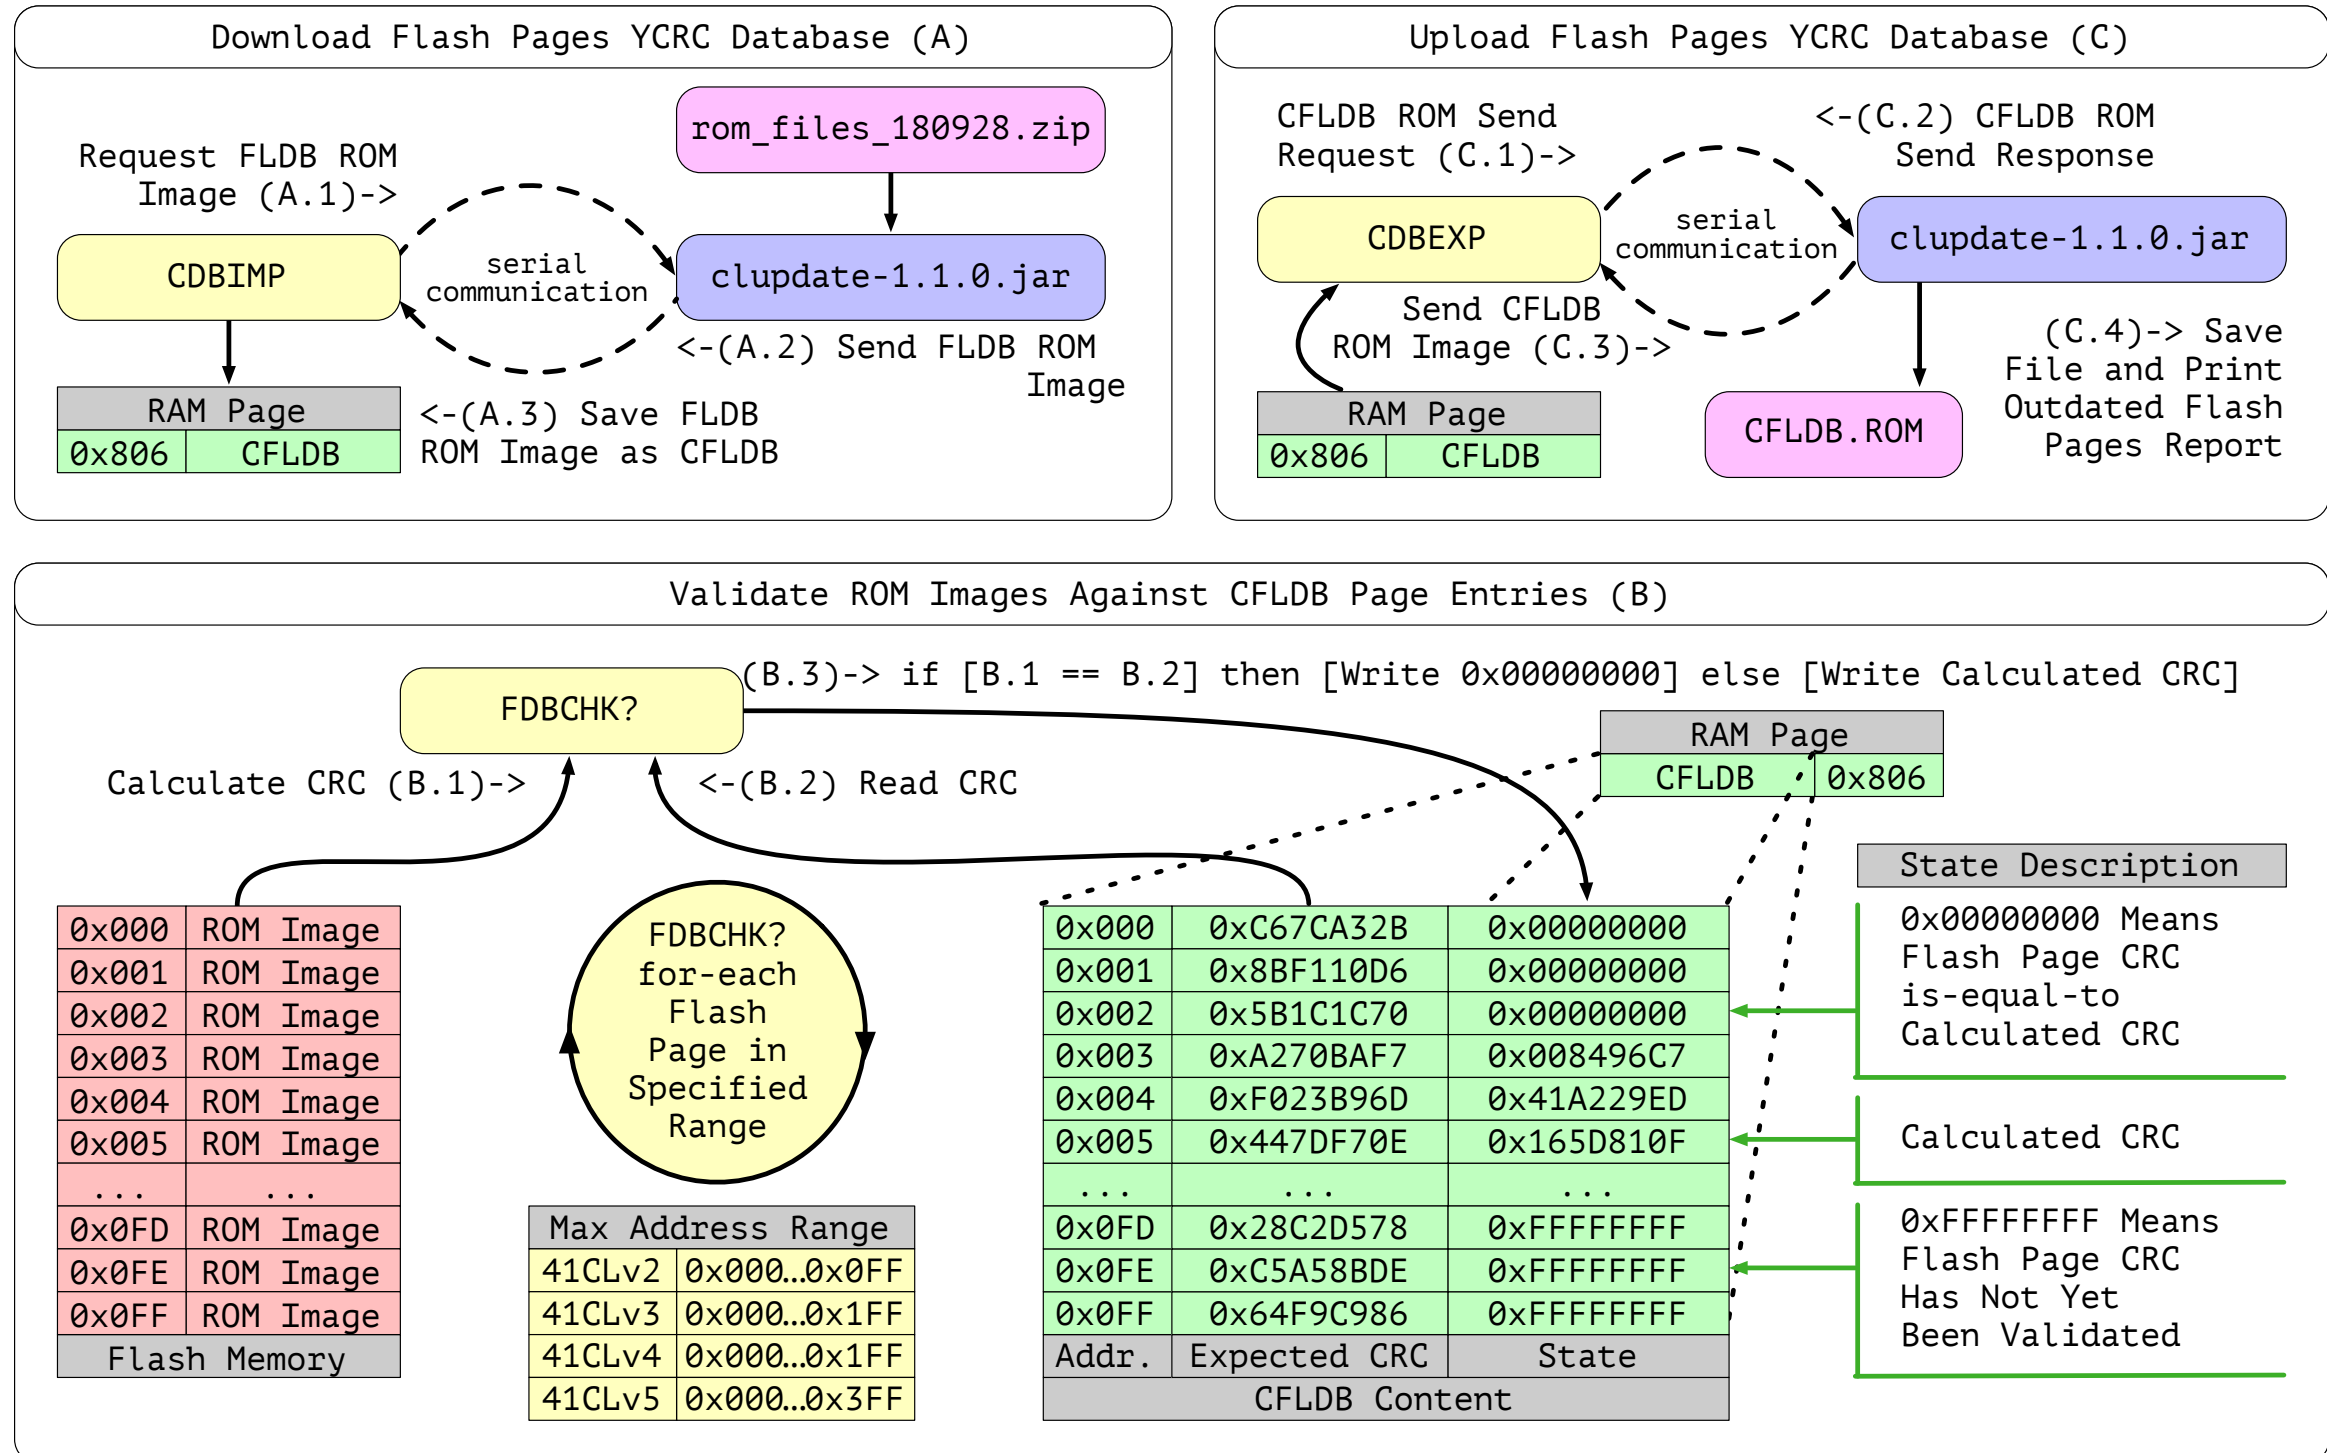

- Open communication channel
- Scan Flash memory for outdated ROM image in specified Flash page range
  - Download new CFLDB ROM image
  - For each Flash page on specified Flash page range
    - YCRC ROM image located in Flash page
    - Compare calculated YCRC value to the stored YCRC value in CFLDB
    - If both values are identical
      - Then mark ROM image entry in CFLDB as valid
      - Else mark ROM image entry in CFLDB as invalid
  - Upload updated CFLDB ROM

- Update outdated ROM image in Flash within specified Flash page range
  - For each Flash block that has at least one CFLDB invalid ROM image entry within the specified Flash page range
    - Copy Flash block to RAM buffer block
    - For each outdated RAM buffer page in RAM buffer block
      - Download new ROM image from serial port
      - Write new ROM image to RAM buffer page
    - Erase Flash block
    - Copy RAM buffer block to Flash block
- Close communication channel

HLMAT42.ROM	[Page:0x0E5 ID:SM44 Rev:2018-09-10 YCRC:0x555C8744]	!=	HLMAT42.ROM	[Page:0x0E5 ID:SM44 Rev:2018-09-28 YCRC:0x4D56A1ED]

Summary: 5 outdated pages, out of 256 pages, spread over 2 Flash blocks, estimated update time: 00h 07m 04s

The above report reveals that five ROM images have changed between these two rom files releases. The summary line show you the number of outdated pages in how many Flash blocs and an estimate on how much time it will take to do the update.

close communication channel

FDBVER?

09/28/2018

Get FLDB version currently active in your 41CL, referencing the file: rom\_files\_180928.zip

At this point your 41CL should be up-to-date to the rom\_files\_180928 level.

# CLOSING TOPICS

---

# UPCOMING FEATURES

.....

## administrative

user's manual (yes, finally, I am more than late on this one)

publishing source code under an open source licence

migrating to OpenJDK 11

## clupdate v1.2.0

new option [--update2] will allow you to specify a CFLDB folder as input giving you the possibility to specify a custom CFLDB.ROM and CFLDB\_V2.ROM files

## clupdate v1.3.0

will introduce a configuration file for storing default serial port, speed, etc.

## clupdate v1.4.0

new option [--diff2] will allow you to make a CFLDB's from two distribution files duplicating the functionality of the FDBCHK? function with the effect of reducing the update time by half.

## clupdate v1.5.0

new option [--build] will create FLDB & IMDB files from a csv file allowing you to create your own custom ROM mapping.
