

HEWLETT  PACKARD

HP-65

PROGRAM FORMS

Merged Operations

STO 1	STO 5	RCL 1	RCL 5	$g \ x \neq y$	$g \ x \neq y$
STO 2	STO 6	RCL 2	RCL 6	$g \ x \leq y$	$g \ R+$
STO 3	STO 7	RCL 3	RCL 7	$g \ x = y$	$g \ R+$
STO 4	STO 8	RCL 4	RCL 8	$g \ x > y$	$g \ NOP$
					$g \ LSTX$

To create and record a program:

1. Set the W/PRGM—RUN switch to W/PRGM.
2. Press **f** **PRGM** to clear memory.
3. Key in program steps.
4. Insert an unprotected (unclipped) card (printed side up) in the right, lower slot of the calculator. When the motor advances it through the card reader and out the left side of the calculator, the program is stored on the magnetic card.
5. Set the W/PRGM—RUN switch to RUN, and the program is ready to be used.
6. The information recorded on the card can be protected (that is, further recording is not allowed) if you clip off the upper left corner of the card.

Notes:

1. **STO 9** and **RCL 9** are not merged operations.
2. Trigonometric functions, rectangular-polar conversions and relational operations (**$x \neq y$** , **$x \leq y$** , **$x = y$** , **$x > y$**) use register R_9 for scratch.
3. Conditional operations (**$x \neq y$** , **$x \leq y$** , **$x = y$** , **$x > y$** , **TF1**, **TF2**) skip two steps if false.
4. **DSZ** decrements contents (r_8) of register R_8 and tests against zero as shown below:
